

EMERGENCY PREPAREDNESS AND RESPONSE

REF:	CPG08
ISSUE:	04
DATE:	02.01.2025

1. Purpose

- 1.1. This guidance note defines the arrangements used within the organisation to ensure that suitable emergency preparedness arrangements are established for all work areas including head office and site locations.

2. Responsibilities

- 2.1. The **Senior management team** holds the main responsibility for the establishment and communication of the site emergency preparedness protocols for all office, manufacturing, and warehouse locations.
- 2.2. The **Field engineering manager** is responsible for coordinating with customers to ensure that all the required emergency preparedness protocols have been established and communicated to members of the field service team. Field engineering staff are obliged to follow the rules communicated to them during the customers' site inductions.
- 2.3. Department managers are also responsible for providing the necessary level of inductions to employees, visitors and contractors and are also responsible for ensuring all established emergency preparedness protocols are tested and monitored.

3. Process - Office, Manufacturing, and Warehouse Locations

- 3.1. The senior management team shall ensure that suitable emergency response arrangements are in place to help protect all employees and personnel under its control. The arrangements will consider the findings from the organisations risk and aspect assessments and all applicable legal and other requirements detailed in the **CPF006 Legal and Other Register**.
- 3.2. Employees and visitors will be informed of the site's emergency response arrangements on arrival and during their initial site induction. The induction will include the contact details of key persons i.e. First Aiders, Fire Marshals etc.
- 3.3. All established emergency response arrangements will be subject to regular testing with drills carried out as specified in buildings specific documentation i.e., fire logbooks. The organisation will keep records of all drills and tests.

4. Process – Off Site Locations

- 4.1. Project specific arrangements shall be established as part of the **CPP05 - Operations** procedure and will consider the findings from the organisations risk and aspect assessments and any customer specific requirements.
- 4.2. Prior to commencement of sitework all operatives will be provided with a suitable level of site induction. This induction will generally be provided by the customer, however on occasions emergency preparedness arrangements will be recorded in the site-specific documentation. It is the field engineering manager's responsibility to ensure that these arrangements are communicated and understood by the site operatives.

5. Emergency Response Planning

- 5.1. **Appendix A** of this procedure defines the escalation and emergency response arrangements used for both onsite and offsite work. It defines who is responsible for dealing with emergency incidents, the steps to be taken by key stakeholders along with the required communication requirements.

EMERGENCY PREPAREDNESS AND RESPONSE

- 5.2. In addition to the provision of the emergency response plan the organisation has created a series of QR codes which link to the emergency response plan itself and a separate list of emergency contact numbers.
- 5.3. **Appendix B** Provides a contact list of 'Emergency Numbers' whereby a scenario occurs, and escalation is required.

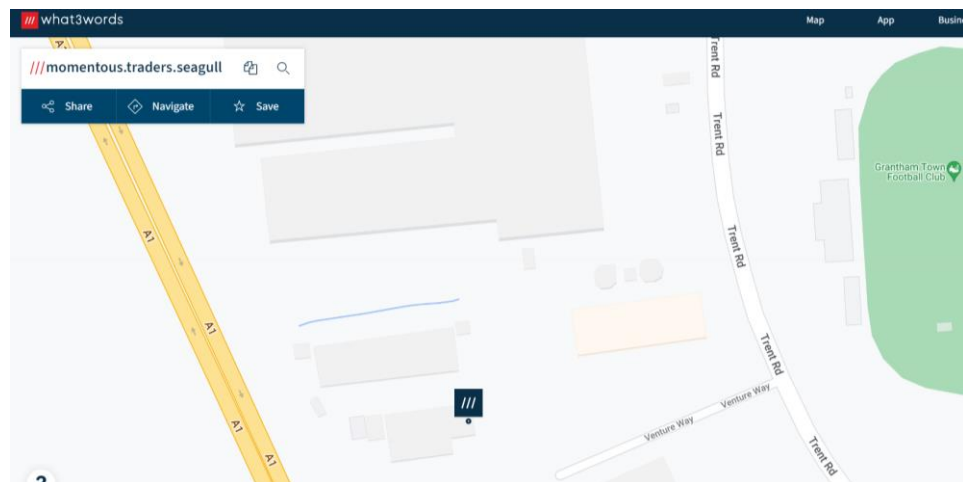

6. Process – Lessons Learnt

- 6.1. Where emergency response arrangements are instigated either as part of a test, drill or for an actual incident, the senior management team will ensure that all personnel involved are debriefed and a review of the arrangements takes place to ensure they remain robust and appropriate to the circumstances. **Appendix C** contains a template to be used to document a 'Critical Incident Timeline'.

7. Working Remote or Alone?

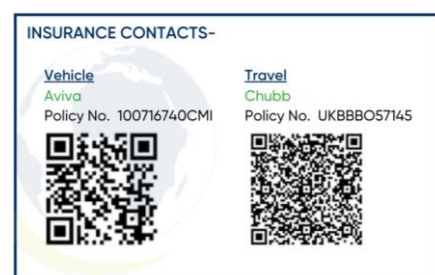

We strongly recommend downloading the 'What3words' app available on both IOS & Android. Every 3-metre square of the world has been given a unique combination of three words. This could be useful for navigation & emergencies.

8. Example Emergency Contact Card

Each employee will be provided with a workplace emergency contact card, the purpose of this card is to provide the employee with quick access to our procedures and policies whilst also providing contact details of your line manager in case you are involved in an accident. This will allow the line manager to escalate appropriately as per Appendix A. An example of the card is shown below.
